

Overview of SK Press Open Die Forging Press Machine

SKEM specializes in manufacturer of ultra-large, ultra-high pressure, super-precision hydraulic presses as well as hydraulic systems. The Company is committed to creating products that meet the needs of customers.

The Company's hydraulic presses are widely used in many manufacturing industries including building materials, chemical & petrochemical, power generation, aerospace, shipbuilding, automobile and rubber & plastics. In each field, the Company's presses are used to produce various parts and the best quality products.

In particular, the presses are used for production of pipe fittings and for steel plate bending, metal working, deep drawing, hot & cold forming and forging.

Open Die Forging Press

SKEM design and develop excellent [Open Die Forging Press for sale in Korea](#). Our products are best performance and durability and reward customers with full satisfaction

Hydraulic forging press is a press for makings forging part with high strength and durability.

High strengthened frames are applied to the press so that it can maintain the high precision under any severe condition. This press is usually used for producing high valued or high function products such as parts for airplanes, ships, turbines, nuclear power generation, wind power generation and so on

Manufacturing range: 500 ~ 15,000 Tonne

Sung Kwang, one of the leading [Hydraulic Press Machine Supplier in Korea](#). We offers other products like Pipe fitting & metal forming press, Metal forming press, Ship building & Pipe forming press, Deep drawing press, Open die forging press, Automotive parts press, Hot Molding and foaming press.
