

Frequently Asked Question on Invisalign

Currently the length of orthodontic treatment with fixed appliance is between two and three years, exposing the patient to a higher risk of tooth decay and external root stress and also pose a negative impact on the level of compliance. But not anymore after the coming of an innovative product known as Invisalign. This post contain all FAQs on Invisalign you need to be aware of.

when you want the
results, and the
flexibility too

Q: How much does the Invisalign device?

A: As with any other orthodontic treatment, the cost of Invisalign depends on many factors, including the complexity of the case of each individual patient and the duration of therapy. In general, the cost and 'slightly higher than that of metal braces and can' still be deferred during the care.

D: Invisalign really work?

A: Yes. Clinical research at the university level and at private studies worldwide have shown the effectiveness of this treatment.

Q: The insurance covers the cost of the device Invisalign?

A: It depends on the type of policy and coverage of each individual patient. If you are 'covered for orthodontic treatment, Invisalign can' be considered as the unit of metal.

Q: Where can I see cases finished with Invisalign?

A: To view cases before and after treatment Invisalign, visit the section of the site treatment / orthodontics.

Q: What is Invisalign?

A: Invisalign and 'an innovative [orthodontic](#) treatment that can straighten your teeth without metal wires. Invisalign employs a series of removable, clear, built on the bite impression of the dental patient, spanning teeth like a glove on a hand. Each mask gradually move the teeth that need to be realigned.

Q: How does Invisalign works?

A: Invisalign uses a three-dimensional computer technology which enables you to gradually complete treatment plan from the initial position of your teeth to the final. Each aligner moves teeth slowly over an interval of around 14 days, after which will be changed with the next until the teeth do not reach the chosen end position.

Q: What are the main benefits of Invisalign?

A: Here are the top Benefits of [Invisalign](#):

1. The aligners are virtually invisible when worn and therefore no one will know 'that you're bringing the two.
2. The aligners are removable, so you can 'eat and drink what' you want, so as brushing your teeth properly to maintain proper oral hygiene (made difficult however with whalebones fixed)
3. The aligners are comfortable, wireless attacks it fixed, there is no problem of irritation in the mouth. The Invisalign treatment allows the patient to see their teeth move gradually and then evaluate the final result before initiating therapy.

Q: What are made aligners?

A: The masks are made of a transparent polymer, widely used in dentistry which happens to be resistant and virtually unnoticeable when worn.

Q: Invisalign and 'a new way to straighten teeth'?

A: Yes. For years both orthodontists and dentists have used similar equipment to make small dental movements. Today, thanks to advances in computer technology, Invisalign can treat a greater number of cases with greater precision.
