CENTRIFUGAL PUMPS

The word centrifuge literally means “in line with” or “centrifugal.” It is a machine used to force air through a rotating piston cylinder, moving it from one side of the pump to the other. A centrifuge is a type of centrifugal pump that uses centrifugal force to move air through it. It is most often used in industrial settings where there are stringent requirements for oxygenation and emissions control. In this article, we will be looking at the different types of centrifugal pumps and how they can be used in your smallest industrial installation. You might wonder what kind of application would be best suited to this particular model.
