

# SCIENTISTS DISCOVER 12 NEW CLOUDS

## Inventing New Cloud Species to Match Climate Engineering and Man-Made Clouds

Scientists discover 12 new types of cloud - and some of them are stunning - New entries include the wave like asperitas, the roll-like volutus, and contrails, clouds formed from the vapour trail of aeroplanes

## Study Shows Clouds Are Bad News for Greenland Ice Sheet - 'This is something we have to get right if we want to predict the future'

This article comes close to admitting artificial clouds and chemtrails are causing global warming

## BBC: 'Chemtrails' To Be Recognised As New Type Of Cloud - According to BBC

meteorologist John Hammond's comments, trails left behind in the sky by airplanes, known by many as 'chemtrails', could be added to an official cloud reference encyclopedia.

**Clouds Aren't Where They Used to Be - Shifting patterns don't bode well for planet, say scientists**

<http://www.newser.com/story/227961/clouds-arent-where-they-used-to-be.html>

**CLIMATE ENGINEERING COMES OUT of the CLOSET:** “Earth Hackers” Adopt Radical Methods to Stop Climate Change - Climate change is one of the hottest debates in the world right now. As you know, an overwhelming majority of the scientific community agrees that humans are affecting climate. And here in the United States, several key members of the Trump administration — including the new Environmental Protection Agency chief, Scott Pruitt — doubt the veracity of the “science.” We’re not picking sides today. But either way, the stage is set for an epic showdown. And as senior analyst Jonathan Rodriguez reveals below, the methods to “fix” climate change are even more controversial than the science itself.

**Geo-engineering and Our Uncertain Future** -- It is probable that, in an attempt to counteract the effects of global warming, humanity will deliberately engage in a large-scale manipulation of environmental processes that affect the Earth’s climate. This could well be one of the most consequential events in human history. We can predict with reasonable confidence that some “geo-engineering” scheme to extensively modify environment systems or control climate will be implemented in the coming decades. There are two main reasons for this.
