

Benefits of Gaming - PC and Game titles

[Gaming](#)

New PC and game titles are not only able to providing fun and excitement for everyone, however they may also give certain benefits and advantages.

With the aid of advanced technology and recognition, the gaming industry has advanced and expanded rapidly through the years.

[walkthrough](#)

If we are searching for categorization of videos games, they are broadly divided into eight major categories:

Action

These are busy and may contain a large amount of violence for this reason. Action games are often inappropriate for children. Such games come under the category "M" (mature-rated). Examples are Halo, Star Wars, Jedi Knight and Go into the Matrix.

Adventure and Role Playing

They are normally less graphic as action games and may go ahead and take player into surrealism and fantasy. Though adventure and role-playing games often contain violence, it is not found to be as intense as the violence in action games.

First Person Shooters

Because the name implies, it is a game in which the player sees the experience with the eyes of the character he is representing and requires the use of pistols or rifles to kill the enemy. Due to the violence involved in this genre of games, they aren't ideal for young kids.

Construction and Management Simulation (CMS)

Because the name suggests, in the games belonging to this genre, the players are expected to construct, expand and manage imaginary projects and communities with hardly any resources.

Strategy

Here the accent is on strategy instead of on violence and these games are slower which provides the player time for strategic thinking, resource management and intending to achieve victory. The majority are warfare based and thus violence is not completely absent.

Simulation

These are video or video games that simulate real life situations under game settings.

Platformer

The Platform Game or Platformer is includes jumping between suspended platforms of varying heights or obstacles and often both to maneuver forward in the game.

PUZZLES

Puzzle game titles really are a class of games that need puzzle solving. The sorts of puzzles that should be solved can involve many problem solving skills for example using logic, word completion sequence solving, strategy and pattern recognition.

Nowadays, game titles are enjoyed by a wide cross-section of our society, from toddlers to grandparents and these happen to be accepted by everyone as a good types of entertainment and seen to become better than watching television because it necessitates the viewer's participation and interaction.

The overall feeling is the fact that game titles don't provide any advantages to the gamer and particularly so in the case of children.

Unlike this belief, there are many benefits in allowing children to experience certain kinds of games. Most significant of these benefits is the growth and development of:

- ◆ Cognitive thinking skills
- ◆ Fine motor skills
- ◆ Real-time decision-making abilities

◆ Hand-eye coordination

◆ Cooperative playing abilities

Keeping video games out of the reach of kids are only able to deprive them of these benefits.
