

5G Small Cell Technology Meta-Data

Gainesville Small Cell Tower Ordinance 170179A - Draft

<http://goo.gl/QcQRtg>

+++++

HB687 - Advanced Wireless Infrastructure Deployment Act (small cells) was approved into law on Friday, June 23, by Gov. Scott, it is effective 7/1/17.

The bill can be found here at this link:

<http://www.flsenate.gov/Session/Bill/2017/00687>

Essentially it strips local control over the placement of small cell infrastructure in the rights of way on your property. Locals can not restrict structures up to 50 feet. Refrigerator size equipment cabinets can hang off of poles or sit on your lawn.

If your city/county/town has a telecommunications tower ordinance, they will be revising it to comply with this new law. So contact your locals and get involved. Some things we can ask for is advanced notification to property owners and possibly some say on where it goes on the property. Also remember the WSJ article regarding current cell towers exceeding FCC limits, see <https://takebackyourpower.net/wall-street-journal-one-10-cell-towers-violate-rf-radiation-rules/> . Since the FCC does not adequately control this, how is the town/city/county going to ensure compliance? Maybe we can request annual testing, random inspections or penalties for non-compliance into the codes.

Florida League of Cities Alert-Help Stop Threat to Local Authority from Bad Wireless Infrastructure Telecom Bills

<http://colodnyfass.com/florida-league-cities-alert-help-stop-threat-local-authority-bad-telecom-bills/>

Help Stop Threat to Local Authority from Bad Telecom Bills

Talking Points

Florida's communities embrace the latest innovations in technology to improve the lives of our citizens. But it's outrageous for giant corporations to be empowered to trample on the authority and responsibility of our local elected officials to protect public safety and the aesthetics of our communities. That's exactly what will happen if telecom companies are given open and unchecked access to disrupt public equipment and our rights-of-way - paid for with our tax dollars.

The Florida Legislature is considering SB 596/HB 687, a bad bill that could become a dangerous new law. It would:

Blatantly interfere with the ability of hundreds of communities to protect public safety and maintain their local, unique look and feel.

Allow unchecked proliferation of new poles and equipment that could jeopardize public safety by interfering with pedestrians, enticing kids to climb recklessly, creating additional debris in a hurricane, and tying up space that should be reserved for police/fire radio antennas.

Nullify the wisdom of Florida cities to bury utility lines. Those communities would be forced to allow ugly, invasive towers up to 60 feet high on public-access land.

Accept refrigerator-sized equipment glommed onto existing structures or sidewalks in public rights-of-way,

creating a permanent eyesore.

The bill leaves taxpayers defenseless:

It amounts to a corporate handout, allowing giant for-profit companies to install infrastructure on publicly owned structures at almost no cost to them – they make the smallest investment possible, building on the backs of the taxpayers.

Taxpayers would be burdened with the expense of making sure plans for towers meet building codes – even if the wireless companies later drop those plans.

Once the telecom companies move on to the next technology, communities would be stuck cleaning up the abandoned equipment – now junk – that they leave behind.

The legislation stomps out local decision-making:

It would strip decision-making from the hands of the local community’s elected officials.

Big Telecom would win its way for its private agenda – and stick everyone else as the loser.

Telecom companies would be given preferential treatment to “cut in line” in the local permit review process, making everyone else second-class citizens.

There’s time to stop this statewide plan that could disrupt every local community. Before this bad bill becomes a dangerous law, state legislators need to step up, speak out, and fight for the best interests of the local constituents who sent them to Tallahassee – rather than boost the agenda and profits of giant corporations.

+++++

5G (and Telecom) vs. The Internet

2/25/2017 - Bob Frankston - The idea of solving application problems inside a "5G network" runs counter to the concept of the Internet. So what if a single hop radio has high performance -- we can't make any promises beyond that point unless we have a provider that owns the entire path. That's in conflict with the

idea of best efforts connectivity and solving problems at the end points.

<http://rmf.vc/5GvsInternet>

Devra Davis - Environmental Health Trust - The FCC Approves 5G Millimeter Wave Spectrum Frontiers
On July 14, 2016, the FCC voted to approve Spectrum Frontiers, making the U.S. the first country in the world to open up higher-frequency millimeter wave spectrum for the development of 5G fifth-generation wireless cellular technology. Health, safety and environmental evaluations to understand the impact on humans, wildlife and the environment have not been done.

The FCC was flooded with comments in opposition to 5G. Please see here some examples of those comments.

<https://ehtrust.org/policy/fcc-approves-5g-millimeter-wave-spectrum-frontiers/>

+++++

What is a Microwave Frequency?

Microwaves are a form of electromagnetic radiation with wavelengths ranging from one meter to one millimeter; with frequencies between **300 MHz (100 cm) and 300 GHz (0.1 cm)**

<https://en.wikipedia.org/wiki/Microwave>

+++++

Microwave Ovens = 2.45 Ghz

The microwave frequencies used in microwave ovens are chosen based on regulatory and cost constraints. The first is that they should be in one of the industrial, scientific, and medical (ISM) frequency bands set aside for non-communication purposes. For household purposes, 2.45 GHz has the advantage over 915 MHz in that 915 MHz is only an ISM band in the ITU Region 2 while 2.45 GHz is available worldwide.[citation needed][vague] Three additional ISM bands exist in the microwave frequencies, but are not used for microwave cooking. Two of them are centered on 5.8 GHz and 24.125 GHz, but are not used for microwave cooking because of the very high cost of power generation at these frequencies. The third, centered on 433.92 MHz, is a narrow band that would require expensive equipment to generate sufficient power without creating interference outside the band, and is only available in some countries.

The cooking chamber is similar to a Faraday cage to prevent the waves from coming out of the oven. Even though there is no continuous metal-to-metal contact around the rim of the door, choke connections on the door edges act like metal-to-metal contact, at the frequency of the microwaves, to prevent leakage. The oven door usually has a window for easy viewing, with a layer of conductive mesh some distance from the outer panel to maintain the shielding. **Because the size of the perforations in the mesh is much less than the microwaves' wavelength (12.2 cm for the usual 2.45 GHz), microwave radiation cannot pass through the door, while visible light (with its much shorter wavelength) can.**
