

NUCLEAR TESTS in VAN ALLEN BELT

NASA discovered it in 2008: Giant Breach in Earth's Magnetic Field Discovered

Dec. 16, 2008: NASA's five THEMIS spacecraft have discovered a breach in Earth's magnetic field ten times larger than anything previously thought to exist. Solar wind can flow in through the opening to "load up" the magnetosphere for powerful geomagnetic storms. But the breach itself is not the biggest surprise. Researchers are even more amazed at the strange and unexpected way it forms, overturning long-held ideas of space physics.

"At first I didn't believe it," says THEMIS project scientist David Sibeck of the Goddard Space Flight Center. "This finding fundamentally alters our understanding of the solar wind-magnetosphere interaction."

and if you recall:

What NASA discovered in 2008: Physicist Susan Joy Rennison in 2011: Nobody wants to talk about it:

Mass Coronal Ejections/ Electromagnetism/ the South Atlantic Anomaly, and how we have done a lot of damage to the earth and the affects on humans;:

The South Atlantic Anomaly is a hole where the weakest part of the magnetic field where the Van Allen radiation belts are very close to earth. This hole is getting bigger and bigger creating problems with satellites and software errors. Scientists do not want to talk about humans, its all about technology. So now we are going to talk about humans too. The discussion of "Fire in the Sky" is that we haven't actually helped ourselves on the planet. Over 2000 tests were set off between 1945 and 1996. Its like blowing holes in the roof...and when it rains it is going to get wet. Scientists have a problem, by setting off bombs in the Van Allen Belts. The damage that was done in the 1960's by the Americans and Russians, they went crazy, they weren't happy with the ionosphere, nothing was good enough for their communications, , they wanted to destroy the natural system and create something artificial, even though they do not understand how the earth works and what all these radiation belts were doing. They literally set fire to the skies a few times. They did this in secret, without anybodies permission.

Get educated on how to prepare for a sunstorm: Scientist Nick Hodgson explains :

NASA Emergency Impact Warning Solar Storm –

“Forget Asteroids: Solar Storm Could ‘Cause Apocalypse on Earth With Just 12 Hours Warning

But what NASA is not telling the general public, is what we should be doing to prepare only that they tell us to do so. Unlike hurricanes and snowstorms, most have no idea what they could be doing to prepare for a sunstorm.

Nick Hodgson explains why individuals should study, plan and prepare for such a likely event: Despite that high profile scientist Nick Hodgson with NASA and the National Academy of Science had originally warned us about solar storms in 2014-2017 and it's now 2016, we ourselves have no way of knowing one way or the other if any catastrophic events will take place such as solar storms, great earthquakes, super volcanic eruptions, pole shifts, planet crossers and so forth. There by we do not imply or make any such claims of pending catastrophic events, rather we simply report on the facts as we find them.

High profile scientist Nick Hodgson with NASA Nick Hodgson explains why individuals should study, plan and prepare for such a likely event, in order to avoid great hardship and hunger. Life insurance and protection requires many different approaches and this is probably one worst case scenario you have not thought of but need to. Whether it's an atmospheric nuclear EMP from the Sun or a bomb. It is best to be aware of what can and will happen one day quite probably in your life time.

Nasa - Massive Solar Flare CME , EMP will hit the earth.

SHOCK ALERT: Hole found in Earth's magnetic field - humanity at risk of cosmic radiation. A HUGE hole has been detected in the Earth's magnetic shield, leaving millions of human beings vulnerable to deadly cosmic radiation, scientists have warned.
