

# What are the Prime Features of the best 32-Inch Smart TVs?

Presently, 32-inch TVs are quite popular due to their convenient size. A large number of manufacturers offer 32-inch full HD TV, which provides the buyers with a wide selection of models to choose from. However, if you are after a TV which would keep you entertained for hours, it is best to go for a smart TV. These televisions are capable of performing a large number of additional functions compared to the conventional ones. The main reasons why you might want to go for such a TV are:

**Modern OS:** Smart TVs run on sophisticated operating systems, Android being the best among them. Android OS would allow you to sync the TV with your smartphone, and use it for various purposes such as screen casting. Moreover, Android OS supports a wide range of applications, allowing the users to stream movies and music from various sources. In fact, you may even download apps or games from Google Play and run them on your TV.

**OTT:** The [best 32 inch smart TV](#) would come preinstalled with the most popular OTT and other streaming apps. Netflix, YouTube and Amazon Prime Video are some of them. This would enable you to stream your favourite shows at your own convenience. The wide selection of content from around the globe is one of the reasons behind the popularity of smart TVs.

**Voice recognition:** If you are looking for a leisurely experience, you might want to pick a TV with voice recognition features. This implies that the TV would be able to receive voice commands and perform necessary functions. You may use your smart TV to run Google Searches using Google Assistant on Android TVs. You could even use voice commands to make the TV play your favourite shows or make adjustments to volume, display, etc.

**Smart AI:** The display and audio of the top smart TVs are backed by intelligent artificial intelligence. The AI optimises the display and processes the images constantly to deliver an immersive experience. For example, the micro dimming feature involves the adjustment of brightness in different parts of a picture simultaneously for better contrast. Your TV might even come with a sports mode, which enhances the picture quality of live events and sports. When enhanced by AI, sound quality is much better and dynamic. For example, the AI can detect the type of content which is being played and accordingly optimise the sound. While switching TV channels, the volume would be adjusted automatically.

**Edge-cutting technology:** As smart TVs are quite sophisticated in nature, they are usually manufactured by leading brands. You may expect a smart TV to come with modern hardware and sophisticated technologies such as HDR display, Dolby Audio, etc. This ensures a better quality of sound and display.

If you are planning to [buy 32 inch LED TV](#), you should go for one from a leading brand with the latest features. You may check reviews online before you make a purchase.
