Everything you should know about Ethereum Dapps

DApps Simplified (DApps, dapps, Dapps,dApps)

A decentralized application or dApps are applications that run on the **Blockchain or P2P networks** or even on a network of computers. A special feature is that these applications are outside the control of a single governing body.

Breaking Down dApps Further

A **traditional web or mobile app** like **Uber/Twitter** is run on a single computer which is controlled and operated by a single organization. This organization has the complete authority to operate, stop or tamper the app. Though there are **multiple user**s on one side, there will be one point of control for the back-end.
