

Fire door inspection

FIRE DOORS
PRODUCT SERVICES

Product Description

Dock Technik offer a comprehensive door solution including Fire Door Inspectors and Fire Door surveys. Our Fire door inspectors are fully FDIS accredited to undertake a range of Fire Door inspections, Fire Door surveys and provide Fire Door certifications. Dock Technik regularly undertakes Fire Door inspections in commercial buildings, industrial buildings, hospitals, high rise residential buildings, office blocks, university campuses and student halls of residence with the aim of keeping occupants safe by helping to prevent fires spreading.

Our Fire Door experts check a range of things, including:

- Does the Fire Door have the correct fire rating for its location
- Is the Fire Door fitted properly, without the type of gaps that can damage the building's fire compartmentation.
- Ensuring the Fire Door is not damaged in a way that would impair the Fire Doors performance in the event of a fire.
- Confirming the Fire Door has the right fire door hardware and doors, and that the Fire Doors function correctly
- Checking the Fire Doors installed have the right intumescent strips
- Checking if the Fire Door is identified on both the fire door signage and in the building's asset register
- Where the Fire Door has glazing, confirming if the glazing is appropriate for the Fire Door installation and ensuring that the glazing is fitted correctly to the Fire Door.

When our Fire Door Surveyors have inspected your Fire Doors you will be provided with a comprehensive report describing each fire door's condition and highlighting any necessary remedial work on each fire door set. Where Fire Doors are found to be non-compliant, we can also supply a detailed quote for the work required to rectify the Fire Door defects.
