

Best Heart Hospital in Dombivli

With a mission to give patients the best results possible for heart-related conditions, Sai Hospital stands out as a cornerstone of cutting-edge cardiac treatment in the busy metropolis of Dombivli. An extensive array of services tailored to meet the complex demands of cardiac patients makes Sai Hospital, widely regarded as the [Best Heart Hospital in Dombivli](#), the epitome of medical expertise. Examining the fundamental elements of Sai Hospital's cardiac care program, this article highlights the hospital's cutting-edge infrastructure, highly skilled medical staff, and creative methods that set it apart as a pioneer in the field of cardiac care.

Our Revolutionary Cath Lab: The Foundation of Our Heart Care

Our cath lab is manned by the [best interventional cardiologists in Dombivli](#) and is furnished with the newest technology. Here, our specialists carefully and precisely carry out therapeutic operations as well as diagnostic tests. Our cardiac services would not be possible without this cutting-edge facility, which allows us to deliver minimally invasive procedures that are less painful and need shorter recovery times than traditional surgery.

Full-Service Heart Care at Sai Hospital

Diagnostic Services:

The foundation of our cardiac care at Sai Hospital is our diagnostic capacity. We use a variety of cutting-edge diagnostic equipment to analyze and diagnose heart issues precisely. Our staff comprises the [Best Cardiac Doctor in Dombivli](#).

The ECHO cardiography

With this non-invasive ultrasound technique, our cardiologists can diagnose various cardiac disorders, such as heart valve problems and heart failure, by providing precise images of the structure and function of the heart. It is essential for tracking the development of heart disease and the efficacy of therapy.

-Meditation Stress Test (MST)

A stress test helps assess how your heart works during physical activity and is frequently performed under the supervision of the [Best Cardiologist in Dombivli](#). It can detect coronary artery disease, establish safe exercise thresholds, and evaluate the efficacy of cardiac therapies.

24-hour Holter Surveillance

Wearing a portable device that continuously records your ECG for 24 to 48 hours is required for this test. It plays a crucial role in identifying erratic heartbeats that are missed by a standard ECG examination.

-MRI and CT scans of the heart

These imaging procedures give precise images of the heart and its components, providing important details regarding the structure and operation of the heart. They are crucial for determining the severity of coronary artery disease, detecting complicated congenital heart abnormalities, and organizing interventions.

Cardiology Interventions:

Leading a team of experts in minimally invasive techniques to treat a range of heart issues without the need for traditional surgery is our Best Interventional Cardiologist in Dombivli.

- Stenting and Coronary Angioplasty

A little balloon is inflated at the location of the coronary artery blockage during this treatment. To maintain the artery open and enhance blood flow to the heart muscle, a stent is frequently implanted.

-Valvuloplasty Balloon

This treatment is done to open a stiff heart valve, much to angioplasty. A balloon is placed and inflated to widen the valve opening in cases of narrowing valves (stenosis).

-Electrophysiology Techniques

These include treatments for arrhythmias (abnormal heartbeats), including catheter ablation, which involves using a specialized catheter to eliminate tiny tissue segments that are the source of the irregular heartbeat.

Cardiovascular Surgery

Using both conventional and cutting-edge methods, our [best cardiac surgeon in Dombivli](#) treats heart diseases using a variety of surgical procedures.

- Grafting Coronary Artery Bypass (CABG)

By utilizing grafts to reroute blood around constricted or obstructed coronary arteries, this procedure increases blood flow to the heart.

-Repair and Replacement of Heart Valve

In order to guarantee that damaged or diseased heart valves open and close correctly and improve heart function, they are either replaced or repaired.

-Aortic Surgery

Procedures to treat dissections or aneurysms in the aorta, the body's main artery, guaranteeing the secure flow of blood from the heart to the body's other organs.

-Correction of Congenital Heart Disease

Heart abnormalities that are evident from birth can be surgically corrected to improve long-term health and function.

Preventive Care and Rehabilitation

Long-term cardiac health and a full recovery depend on post-treatment rehabilitation. Under the direction of the [Best Heart Doctor in Dombivli](#), our rehabilitation program is customized for each patient and emphasizes lifestyle changes, food recommendations, and physical activity to lower the risk of developing new cardiac problems.

-Rehabilitation of the Heart

A personalized program created to enhance cardiovascular health by stress reduction, heart-healthy lifestyle instruction, and supervised exercise.

Cardiac Preventive Care

Emphasizes managing medications and changing one's lifestyle to prevent heart disease. To find possible problems early, screenings and risk assessments are carried out on a regular basis.
