

# What is Data Warehouse in Data Mining - RootFacts

The [data warehouse in data mining](#) concept is not new but it has been around since ages to help businesses make decisions based on data. However, the uses and applications of data warehousing are changing and upgrading with time. The upgraded data warehousing concept help business managers make better decisions through strategic planning and overpower their competitors in the long run. A data warehouse makes it easy to generalize and consolidate data in the multidimensional view.
