

Top Features to have in a General Surgery EHR Software

What is an EHR?

Electronic Medical Records/ Electronic Health Software, commonly known as EMR/ EHR software, EMR software has been designed to cater to the healthcare industry. EMR software is the modern way of record-keeping in a clinical setting. The software helps you store medical records online and eliminates the use of extensive labor and paperwork. The software could store a plethora of information regarding multiple patients. The information could include patients' medical history, demographics, lab reports, and much more. Different EMR software caters to different specialties. FindEMR has shortlisted the top features to have in a [General Surgery EHR](#) software.

General Surgery EHR Software

General Surgery practices require a swift prescription order system for patients, coupled with a quick diagnostic report management system. Electronic Medical Records software is highly important for General Surgery practices to increase efficiency, offering patients exceptional healthcare services.

General surgery caters to the preoperative, operative, and postoperative functions with reference to surgeries. It caters to patients with a variety of usual and common surgeries that take place. The issues patients face might also include non-operative, elective, or emergency surgical treatment.

General Surgery Practices cater to a large volume of patients on a daily basis and usually is one of the busiest practices. Catering to patients from all age groups and common problems could get very hectic.

Find EMR has researched and shortlisted the Top features to have in General Surgery EHR software.

Templates

General Surgery practices deal with high volumes of data in catering to patients and their diseases. In order for the practice to run efficiently, note templates are extremely important.

Users should be careful that the EMR system offers them a number of in-built templates that help them in efficient medical billing.

Unique general surgery templates include hernia repair, hemorrhoids, abdominal pain, breast mass, and many more the templates should also include pre and post-surgery follow-ups.

Workflow Management

General Surgery Practices should deal with a number of specialties and also should be able to efficiently manage large flows of data. The software should cater to the clinical aspect of the practice and the administrative aspect as well, which helps in streamlining the workflow of the practice.

Catering to the large volume of data in a General Surgery practice could prove to be tiring and exhaustive. Using EHR software that supports both clinical and administrative side can prove extremely beneficial for doctors and the efficiency of the practice.

Integration

General Surgery EHR Software should be well integrated with labs and electronic medical equipment for easy and efficient flow of data and documentation. The integration of equipment and tools helps users in logging data and keeping records up to date. It also makes the flow of data smooth and users do not have to install external third-party apps to cater to the data being logged while for example diagnosing the patient or undergoing a surgery.

Patient Portal

General Surgery EHR Software should include a patient portal which enables patients to have a smooth communication channel with their doctors. The patients should be able to share documents, pictures, and results and be able to receive e-prescriptions. This saves time and money for both, doctors and patients.

Patient portal is a must for quick service and saving time as it eliminates the need for patients to visit the practice again and again for every small question or query. This saves and buys time for doctors to cater to more patients on a daily basis.

Real-time Dashboard

The real-time dashboard displays all important information in one place during a test or procedure which helps doctors to better examine the patient and also helps them save time as they do not have to open multiple tabs and switch within them.

These were the top features to have in General Surgery EHR software. General Surgery EHR software is a must for general surgery practices in today's industry in order to give users the competitive edge in providing the best level of healthcare service.
