

What is CBD Oil?

CBD, or cannabidiol, is one of over 113 substances discovered in the cannabis plant. CBD is not the stuff that can cause anybody to get "high."

With the tide moving around the world toward medical, leisure, and industrial usage of the Marijuana or Hemp plant, consumer education is crucial as this flexible, but misconstrued plant makes its way into everyday society.

Hemp, containing a minimal quantity of THC (the psychoactive substance in marijuana), has been used for centuries to make paper, rope, food, constructing products, food, and more. CBD oil is originated from hemp plants and contains less than 0.3% THC - under the legal limit. It is a substance that activates the endocannabinoid (ECS) system in all mammals, including both dogs and individuals. The ECS functions with the cardiovascular, digestive, and neurological body systems, as well as playing a part in the body's anti-inflammatory action. CBD triggers receptors in the body, letting the numerous systems interact better and trigger healing advantages.

What can CBD oil do for my dog?

Using CBD oil in dogs is relatively brand-new and studies are now continuous at Colorado State University and Cornell University.

The preliminary finding shows that CBD can be used to help dogs with: allergic reactions; anxiety and worry; [***Every Day Optimal***](#) hunger loss and digestion problems; mobility, joint, and arthritis issues; cancer and growths; persistent pain; skin concerns; seizures and epilepsy; swelling; glaucoma; and spasms. The research study is just beginning.

Unlike lots of prescription drugs, CBD oil does not have adverse effects impacting the dog's liver or kidneys. It is not understood to trigger any long-term toxicity.

The research is simply starting. The American Kennel Club's Canine Health Foundation is moneying a three-year research study on the effect of CBD oil and seizures in dogs.

To date, much of the details on CBD oil usage in dogs seems to be anecdotal as the research catches up with a public interest in the topic.

CBD oil is derived from hemp plants and includes less than 0.3% THC - under the legal limitation. It is a substance that activates the endocannabinoid (ECS) system in all mammals, including both dogs and individuals. The ECS works with the cardiovascular, digestion, and neurological body systems, as well as playing a part in the body's anti-inflammatory response.
