

Emmanuel Palle - Software Engineering Is Primarily a Scientific Field

According to [Lode Emmanuel Palle](#) this is a new field that was developed a couple of years ago. Consequently, there has been an argument over precisely what a software engineer is and which discipline the task is created from. For instance, some say this job is much more inclined to the engineering side of software development and the theory from this field. This is based on the premise that software engineering is primarily a scientific field. But, others oppose and dispute that this job needs a certain amount of creativity, so some aspects of art are applicable.
