

What makes it worth Buying a 4K Smart TV?

In recent years, smart televisions have gained popularity at a rapid pace, with various brands coming up with trendy models packed with smart features. Like smartphones, these TVs run on sophisticated operating systems and offer a variety of additional functions. This makes a 4K Android TV a perfect device for entertainment. Let us check out the features which the latest smart TVs come with.

Voice control

Smart devices are designed to be convenient and easy to use. The best smart televisions come with hands free voice control features. You may operate the TV, search the web, switch channels and perform various other functions using just voice commands. As a result, these TVs are quite easy to use even for children.

Smart interconnection

The AI system in the [best 4k ultra HD TV](#) models can connect and integrate with other smart devices in your home. These include home automations like lights, curtains, sweeping robots and more. You may therefore control the rest of the smart devices in your home with voice commands, using the voice recognition system in your TV.

Latest operating system

The smart TVs run on the best operating systems, especially the Android OS. This greatly enhances the functionality of the television. More sophisticated the operating system, better would be the user interface and more would be the variety of functions you can perform. For example, the latest Android TVs even support high end games, thus allowing the users to enjoy an immersive gaming experience on a large screen.

Wide range of apps

When running on a proper OS, the TV can support a wide variety of apps. Usually they come pre-installed with some of the most popular streaming apps like YouTube, Netflix, etc. to provide the users with a wide selection of content. The best part is that the users can also download more apps from Google Play Store or other app stores installed in the device. On an Android TV, you would also gain access to the various entertainment services from Google, including movies, music, games and more.

AI-powered display optimisation

The AI system in a [4K ultra HD smart TV](#) can optimise the display greatly. The Micro Dimming feature is a perfect example of this. The artificial intelligence divides the display into a large number of zones, analyses the pictures and adjusts the brightness and darkness in each of the zones separately. All this takes place at a speed fast enough that the display looks quite natural, without any lag.

Smart sound

The latest television models come with high-end sound systems powered by Dolby Audio. Moreover, the sound is also optimised by the AI that the TV comes with. For example, the TV can detect the type of content which is being played and adjust the sound settings accordingly. These features are what make a smart TV 'smart'. When you buy a 55 inch 4K smart TV with such features, you may stay assured that it would remain a sophisticated model for several years, offering you quality entertainment.
