

Is Human Error Possible During The Anesthesia Process?

Is Human Error Possible During The Anesthesia Process?

Even when proper protocol is followed, improper training and human errors can lead to serious medical mistakes. Human error during the anesthesia process can lead to the following:

- 01 Improperly calculating the correct dosage of medication
- 02 Confusing one medication for another
- 03 Failing to quickly intubate a patient
- 04 Failing to maintain a clear airway for the patient
- 05 Misreading a patient's vital signs while monitoring them during a procedure & more
