

Does Your Construction Site Have the Required Signage?

There's a saying, every beautiful construction comes with great price. This price can be the currency you pay, but sometime it comes with someone's life. There are many instances where a life is cost due to some accident in construction site. According to International Labour Organisation India has the highest accidental rate among the construction workers, 165 of 1000 gets injured in the work site. According to a study 38 to 73 worker dies every day because of the accidents in construction sites.

So to prevent such massacre it is pretty much necessary to be cautious in the construction area, and there comes the big role of [Safety Signages](#). "Danger", "Warning", "Caution", wherever necessary the required signage needs to be there. By doing this many lives can be saved. If your construction sites don't have the required signages, make sure you install it as early as possible.
