

A complete guide: An intro to StreamPro IPTV Box

StreamPro is a new-age technology that has taken the tech department all by surprise. It has replaced all of the world by surprise. as it has conveniently replaced cable TV as well as satellite TV. It has a lot of features in its built-in technology. But people are facing a lot of difficulties while operating them. Whatever may be the issue we have listed some of the functionalities that you might find useful if you already bought the [StreamPro IPTV box](#) or planning to do so.

What to do initially?

For a period after powering up, you should see the streamPro screen. However, it only takes a few seconds longer than intended after a time.

After that, you'll need to choose a few basic options, as illustrated below...

-Language selection -TimeZone -Resolution -Screen Size -Wireless Connection

Things to remember

To continue, you must first connect to the WiFi network. If you simply attach the Ethernet wire now, the screen will go to the end of the first setup once the box detects the connection.

After that, you'll be directed to the Home/Launcher screen, where you'll see the Chrome Browser app install first, followed by the [Netflix](#) app.

Allow these to install, and you may always uninstall them later if desired.

A firmware upgrade will also be available for your new StreamPro G1 box. This is a necessary update; please proceed.

On the Launcher screen, there should be a few apps installed.

To check the list of useful apps aboard, go to All Apps.

Launcher screen

Click up a sidebar Android menu on the launcher screen of the streamPro IPTV box

You'll find a list of items to look into here. There's also the option of an app, which when clicked brings up a list of all the apps installed on your device. For example, we can open the Google Play Services app and change permissions there. That includes stuff like turning location ON or OFF, and so on. We can also uninstall user apps in this Apps category. We may use the Plus icon to add apps to our Launcher screen once we're back on the Launcher screen.

Click it to open it and see which apps we have on board to add.

On the Launcher screen, which is your IPTV app, you can see StreamPro Emu.

The only way to access the onboard Android settings appears to be through the RCU's settings button.

How to do a factory reset?

Press the Settings button on your remote control. A Factory Data Reset may be found under Settings > Storage & Reset > Factory Data Reset.

After selecting Reset, the system will reboot.

What happens when you select the Reset button?

Any prior server settings will be deleted if you use this reset feature.

Any server configurations will have to be redone

Any saved WiFi passwords will be deleted if you use this reset option.

Any WiFi configurations will have to be redone.
