

Guidelines To Follow Before Booking A Shipment

Are you an entrepreneur or business owner and want to ship your consignment with the help of a reliable logistic company? But here one needs to understand the fact that only booking a consignment with the logistic company for shipping to & from Spain UK will not be enough. These logistic companies have their guidelines, and every business or individual client needs to follow that before booking a shipment. Following these guidelines will not only help the consignment to reach the destination safely but also this will enhance the image of the business in the market.

Guidelines relating to parcels

It is advised to use new double-walled boxes to ship your goods. Many prefer to use reused boxes, but these are not strong enough like the new boxes and may cause damage to the goods. Logistic companies always suggest using cardboard boxes made of corrugated fiberboard. Next is to consider the size of the boxes. You should try to use packaging boxes of appropriate size so that you can save money and save the product from getting damaged.

Guidelines relating to the wrapping of goods

All items that you are going to ship, must be wrapped individually. Necessary precaution is required to be taken while wrapping the item. Proper wrapping will help to keep the items secured in the packing boxes. Different types of wrapping materials are available in the market. You can opt for bubble wrap, shredded cardboard, soft foam, etc to wrap the products safely. However, if the items are more fragile, then double box packaging is suggested. Here you need to arrange a second box which will be wider and deeper than the box in which your products have been packed at first.

Proper sealing of packed goods

Proper sealing of goods is equally important like arranging cardboard boxes and packaging of goods. Once you are done wrapping the goods properly, it is also necessary to seal all the open ends of the boxes. It is suggested to use propylene or vinyl adhesive to seal the boxes. These adhesives are very durable, and hence using these adhesives, there are minimal chances of the seal to get unstuck. However, if the parcel is extremely bulky, strapping is suggested to apply to seal the packing boxes.

Measuring the parcel

Accurate measurement of the parcel is equally important to packing and sealing the parcel. Besides measuring the parcel, you also need to weigh the box accurately. These measurements are required by logistic companies.

Those above guidelines are must to follow by every company before booking a shipment with a logistic company.
