ON-DEMAND CAR WASH MOBILE APP DEVELOPMENT COST AND KEY FEATURES

Smartphones have completely changed the lives of humans in more ways than we can think of. Without a doubt, all the services and demands that you need can be completed within a few clicks on your mobile device through mobile applications.

Back in the days, when there wasn't a mobile for everything and people had to do everything by themselves like if they wanted to wash their car then either they would have to do that by themselves or they would have to wait in a queue for hours until it's their turn. Waiting in a queue doesn't sound so good, does it. But in today's technical age with mobile apps everything is possible. Hack there are even apps for car wash, doesn't that sound amazing. Within just a few clicks you can book a car wash service while sitting at your home.

Types of Car Wash App

1.Aggregator App

It is a standalone business platform model where the detailer offers their service from the app and gets in touch with the clients. aggregator app also provides an adept and accomplished infrastructure to the customers and detailers. This app allows the users to advertise or enlist their services that customers can choose from however he/she wants.

2.Dedicated Apps

Dedicated car wash apps are made for those businesses that focus only on the car wash. By using these apps companies can offer car wash services to their customers personally. Every industry is coming up with new ideas to create their own apps and platforms to provide their services in the easiest way possible. Here are some benefits of a car wash app

- Various car wash categories to choose from
- Augmented ROI
- Enhanced user engagement ratio

The Essential Features of Car Wash App- User interface

1.Registration

The very first screen on which the user lands after opening the app is the registration panel. To use the features of the app, users have to register first with a mobile number or they can also use social media credentials for one-tap login because that way you won't have to go through all the trouble of putting all the information yourself.

2.Find Near-By Detailer

In this feature a list of nearby Car Washers will be displayed so that the customer can see and decide which detailer is the nearest.

3. **Selecting Location**

In order to avail service from the car wash app, users would have to specify the exact location of the service that needs service or washing. Doing that will help the technicians to make adjustments beforehand.

4.Package and Service Selection

The [on-demand car wash app](#) contains a list of various kinds of services and packages based on cost. The customers can select the service that fits them best with their financial requirements.

5.Real-time tracking

It helps maintain transparency between the user and the detailer and also keeps them engaged with each other. The tracking guides users to follow a path to the car wash area which is provided by the detailers on the platform.

6.Add Multiple Car

Sometimes users want to request a car wash service for more than one car. But don't worry, on-demand car wash apps allow you to do just that. So if you need to book a car wash for more than one car.In order to avail seamless car wash services, users can easily add multiple cars to their account.

7.Payments

The car wash app allows you to complete payment from various methods like debit/credit cards or cash.Not only this but other payment gateways are also available like Google Pay, PayPal or Paytm.

The Essential Features of Car Wash App- Detailer Panel

1.Registration

In order to provide [car wash service](#) to the users, detailers also have to log in to the app using the same process as a user. Which is to put the username and password provided by the admin to them.

2.Approve or Refuse Service

The requests which are waiting in the queue or the ones that are aligned in the queue for delivery, detailers can accept or reject new requests assigned by the admin if they don't have the time at the moment.

3.Upload Images

For increasing user engagement ratio and getting more car wash requests, the detailer can upload pre-wash and post-wash images of the car.

4.Payment Request

As for the total number of completed services, detailers can request for the payment from the admins to process the further pending and ongoing service requests.
