

Whole Milk Powder (WMP) Production Cost 2020 | Procurement Resource

WMP refers to whole milk powder, which is produced using whole milk or full cream milk, thus, also referred to as full cream milk powder. WMP has high content of fat. The moisture content is dried using evaporation and spray drying processes, which also extends its shelf life. It is widely used in the production of supplements, dairy, and bakery products. Procurement Resource provides an in-depth cost analysis of WMP production. The report incorporates the manufacturing process with detailed process and material flow, capital investment, operating costs along with financial expenses and depreciation charges. The study is based on the latest prices and other economic data available. We also offer additional analysis of the report with detailed breakdown of all cost components (Capital Investment Details, Production Cost Details, Economics for another Plant Location, Dynamic Cost Model).
