

Flow Meter Market

According to a new report published by Allied Market Research titled, "[Flow Meter Market](#) by Type and End-Use: Global Opportunity Analysis and Industry Forecast, 2019–2026," the global flow meter market size was valued at \$7.3 billion in 2018, and is projected to reach \$11.9 billion by 2026, growing at a CAGR of 6.3% from 2019 to 2026.

A flow meter is a metering device used in almost every process industry to measure the volume or mass of liquid and gas. Flow meter consists of various components including tube, scale, indicator, coil, and others. Flow meters deal with large flow quantities, and hence their performance is very much dependent on the parameters such as pressure, viscosity, density and temperature of the fluid.

The global flow meter market is moving toward the maturity phase in its industry life cycle wherein growth opportunities are largely influenced by technological advancement. Development in technology is helping manufacturers to develop technologically advanced new generation flow meters that aimed to be more user-friendly with better functionalities. Therefore, the need for skilled manpower can be eliminated, reducing the overall cost. Some of the other factors contributing to the global flow meter market growth are the rise in demand for smart and intelligent flow meters and the increase in adoption in industries like power generation, oil & gas, water, and wastewater treatment.

By type, the differential pressure segment accounted for the largest flow meter market share in 2018. This is highly attributed to its unique function of taking a direct measurement of volume. It is one of the traditional types of flow meter whose applications are seen in almost all types of industries. This makes them easily adaptable and easy to operate. This in turn boosts the demand in the flow meter industry.

By application, the power generation industry emerged as the largest revenue contributor due to the dependency of power generation plants on feed water and hydrocarbon fuels to generate electricity. The flow of such liquids or gases is precisely monitored by thermal flow meters to keep the entire plant operating efficiently while productively generating electricity. As a result, flow meters are regularly utilized in power plants to achieve overall plant efficiency. This leads to greater adoption in the power generation industry.

Some of the major market players operating and profiled in the global flow meter market are Honeywell International Inc., Siemens AG, Emerson Electric Company, ABB Ltd, Schneider Electric SE, Yokogawa Electric Corporation, Azbil Corporation, Badger Meter Inc., Hitachi, Ltd., and KROHNE Messtechnik GmbH.

Key Findings of the Study:

- By type, differential pressure flow meter emerged as the global leader by acquiring 29.1% market share in 2018, and it is anticipated to be the largest market during the forecast period
- By end-user, power generation is the largest revenue segment over other end users with more than 30% global market share in 2018
- Asia-Pacific is the largest regional market due to strong industrial growth, presence of emerging economies such as China, India, Japan, and South Korea
- Technological innovation and its incorporation in the flow meter technology is opening up new growth opportunities to the market
- The Middle East is expected to be the new investment centric region due to growing efforts to process seawater through desalination
- Global flow meter market forecast analysis from 2018 to 2026 is included in the report.

About us:

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domains.

We are in professional corporate relations with various companies and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of the domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
