Oracle 1Z0-447 Certification Exam Topics

* Oracle GoldenGate (OGG) Overview

* Describe OGG functional overview and customary topologies

* Describe OGG Veridata and Management Pack functionality

* Describe the difference between real-time data integration replication files Manipulation Language (DML) replication

* Install and Configure OGG

* Download and Install OGG, and differentiate between various installers (zip, OUI, tar)

* Synchronize source and target databases with the Initial Load

* Prepare database for OGG CDC and appearance databases with OGG schema check script

* Configure OGG Replication component parameter files

* Configure the OGG Command Interface to generate OGG processes

* Describe the way to identify and resolve issues in heterogeneous replication, and offer appropriate solutions

* Configure OGG utilities

* Mapping and Transformation Overview

* Implement use cases for transformation functions

- * Implement macros
- * Managing and Monitoring Oracle GoldenGate
- * Manage OGG command files security
- * Implement and troubleshoot OGG Monitoring
- * Explain the configuration and treatments for the Enterprise Manager 12c plug-in
- * Implement and troubleshoot OGG Veridata
- * Architecture Overview
- * Describe OGG components
- * Create both the forms of Capture methods for Oracle database
- * Create a few types of Replicat processes
- * Explain the main difference between an Extract and Pump, and local and remote trails
- * Configure OGG's process recovery mechanism
- * Parameters
- * Describe and compare GLOBALS versus MANAGER parameters
- * Create solutions using component parameters for replication requirements
- * Install OGG parameters
- * Explain and identify parameters specific for non-Oracle databases
- * Configuration Options
- * Describe OGG configuration options (Data Definition Language (DDL), compression and encryption options)
- * Configure OGG event actions according to use cases
- * Troubleshoot conflict detection and determination
- * Configure Integrated Capture, Replicat, and deployment options
