

## Best iPhone x reviews 2018.

Everyone is here for is a low tech and the only for ten are has been known for about a week and a half. For been using of every single day is my primary phone and it's been a mostly positive experience now this is the budget iPhone and comes in it. Seven for the team and for sixty for gigs of storage I wouldn't really call that budget but for an iPhone right now. So it is a budget, so seven nine sixty for gigs of storage for an extra fifty dollars you can get one. And that's the sweet spot on this phone and a hundred dollars for one hundred and me kings of storage. I think will soon most people's needs you can that up to two fifty-six, but then you're getting close to the price of the ten ask and, one of those things were that gets a little bit pricey when getting up to that range and I don't know if you need all that.

So I usually am about thirty to forty gigs of storage. On my phones total after well years had still what I'm using and sixty for is good for most people one twenty is that sweet spot. Now the design is very familiar. It's a little bit different than the ten asteroids to test makes you or lacking that camera bump and the extra camera well you have a camera bomb part of the additional camera. And then you also have the same camera but a different lens than and then smack. So it's still quite as good same sensor and everything you have glass front back wireless charging but aluminum around the outside edges, and that makes it a little bit later.

### What are the best features of it.

But you do have a none or asymmetrical charged parts, so that's strange but the speakers. Symmetrical but that middle lightning connect your charge part is not. And that's probably to make way for the display, and that's the most controversial thing about this phone is the screen is between when twenty-one day and to me. That's not a big deal because the picture will per ranch density is three twenty sex it's the same as the eight or and that's not a big deal to me however for the price of the phone.

in modern phones, it is a little bit low as far as the resolution numbers are concerned now I showed this too many people both photography people video people and I only had once a that these displays to look any different at all. if you looking about how to download YouTube videos into your iPhone then you should read this [tubemate apk](#) article.

I showed them side by side with the tiniest max, and I've had one person see that the I had edge quite around the edges where they curve the liquid retina. This way that's what gives it that name is it's a little fuzzy, and maybe that's true. The text is Chris scholars are great it's accurate its brains. Sunlight I've had no issues with it, and I think the people that are concerned about the numbers.

### Top improvements than Phone 7.

Not taking a look at it side by side now some people have in some people can see the difference for me it's not a concern. When I think most people won't even mind however the fueling angles arm as good as the new I pads fueling angles with its liquid Gratton.

My, and it's good, but it's not as good, and then another thing to consider too is a Flickr bothers you and displays such as myself with the pulse with modulation on an iPhone panicked man for example role that displays this was the phone for you. He doesn't flick it all it has none of those traits because it's an I could display, so you don't get that Flickr doesn't use pulse with modulation to flash this.

To make it brighter a doctor, so you're never getting that Flickr in it. Doesn't harm your eyes so that park has been great to use all week long in this now aside from the display the specs are excellent it's the same as the ted some ten years max minds.Gig of the frame and that's probably because of the display don't need it when you're not pushing. The graphics trip is hard to power all those pixels so because we don't.

### Technical part and software situation.

How do many pixels it doesn't have to work as hard as meat is a much ram and most of the time you don't need to pay attention around anyway on in I think it just works? And you don't have to think about it the

speed of the well is super fast it's underutilized in this phone quite honestly there's.

Now think you're going to do on the phone that's going to be the slow video rendering anything it doesn't matter. It's just not going to be slow so if there's a hiccup that might be part of I lost doing something, but for the most part, you're going to have no issues with that whatsoever. Now the camera the camera on the back is quite good like I said it's got a great video it stabilized for a video for they are it's not exact age spare you can't add it and put it in.

Now, what twenty and actually to our footage with it. But it does look quite good, but it does have great processing due to the neural engine and everything else that's on that a twelve chip. Now the forward face and camera are right it's the same camera that you get.

And all the other iPhone so you're going to get the right death sensor and everything like that when it comes to taking portraits and that sort of things so that does a great job and it's what you expect from the time.
