10. Just select your Print option and print out your document.

Download the program:

In the present, Canon does not provide an instruction manual for installing the driver on CD. Therefore, it is essential to download the right driver for the printer model. Be sure you've downloaded the driver that is compatible with your OS version (Windows or MAC).

How to Install the Printer Driver

If you aren't sure exactly how you can install the driver for your printer for this setup usa.canon.com setup, then follow the guideline given below:

1. Navigate to the location that you downloaded the Canon driver configuration and double-click the ij.start.cannon after which you can run to extract the file wherever you'd like.
2. The main interface of Canon driver setup will display on your device's display. Before proceeding, you must select your preferred language to operate the software for running the printer. So, click on the Language tab. Here, you can select the language you prefer from the choices on the screen, and then click next.
3. The next step is to get connecting your printer and your device. To do this, you have to select your printer once the printer has been connected successfully (you may choose between an wireless connection or USB connection). It will show you a the list of drivers as well as other software that are depending on the printer model.
4. Make sure you check the desired checkbox in your software package. Furthermore, you must have enough space to download the driver for your printer. If you do not have enough space on your device delete any undesirable apps from your device. Click on the Next button and proceed to start Canon.
5. The window of the License agreement will open at the top of your display. It is essential to understand every detail in the document in order to avoid any future issues. If you wish to sign the license agreement it is necessary to select the Yes option. This will immediately start the installation of your chosen drivers and additional software.

6. Later, driver setup is completed; you are able to test the printer's capabilities by publishing the page. The printer plate must contain at least a couple of A4-sized sheets. Then, click on the execute button and your printer will print a page right away. The driver setup is complete.

Hardware Steps

- Before you start the setup, firstly finished the process of hardware set up on your device
- Unbox your printer the same way you see in the video tutorial available through the internet search.
- Utilizing the power cable attach your printer to the power cord . Turn the printer on.
- Then save the basic printing settings, like language, date, location, and time in the control panel.
