**The non-surgical skin tightening market was estimated at USD 421.79 million in 2021 and is projected to reach USD 538.2 million by 2028, growing at a CAGR of 5% over the analysis period.**

Skin is the largest organ of the body, and it guards against infections, regulates body temperature, and enables touch (tactile) perceptions. Skin guards against infections regulate body temperature and enable touch (tactile) perceptions. The epidermis, dermis, and hypodermis are the three primary layers of the skin, which are prone to a variety of diseases such as skin cancer, acne, wrinkles, and rashes. Similarly, when a person loses weight or ages it causes sagging or loosening of skin. Collagen and elastin are the two prominent proteins found in the skin. Depletion of these proteins also results in the sagging of skin. Non-surgical or non-invasive skin tightening procedures utilize devices to stimulate the production of collagen in the layers of the skin. These devices function by shrinking tissue that has lost its tone and elasticity over time.
