Mark your food delivery business presence with the popular Ubereats clone

Jump into the bandwagon of food delivery services with an eccentric application. Yes, you heard it right. **Food delivery app clone** tend to reach heights in on-demand service applications. And Ubereats is keeping its customers glued to their assistance with extraordinary customer support. You can also attain this success with Ubereats clone.

App functioning:

Every application has a few initial settings, like profile registration and verification. In that line, the Ubereats clone has some configurations too. And here are the further steps in reaching out to the service.

- Users will search for their favorite cuisine under the search column.
- With a list of available cuisines, users can select food from their favorite restaurants.
- Based on availability, users can add any number of items.
- Once the user confirms the payment, the admin will take the order.
- Users can track their orders via GPS integrated into the app.

Notable features of the app include:

- **Search field-** The search field enables users to type in names of cuisines/food. Voice search is even more helpful that avoids manual searching.
- **Social media login-** Users can even log in to the app with their social media credentials.
- **Call/Chat option-** Users can call their favorite restaurants and inquire about them in case of any queries.
- **Cancel Bookings-** Users can cancel their booking at any time and claim refund according to app policies.

Conclusion

With many e-commerce platforms, food delivery apps will never narrow down. At TurnkeyTown, we curate Ubereats clone scripts that are scalable and 100% customizable. Schedule a demo call with us, and we're glad to partner with you.
