How to Fix 'Crawled – Currently Not Indexed' Error in Google Search Console

Our infographic shows you **How to Solve Crawled Currently Not Indexed** issues in Google Search Console. This error often occurs because pages haven't been prioritized by Google for indexing. To fix it:

- Improve content quality by adding valuable, unique information.
- Ensure no indexing restrictions (like "noindex" tags).
- Use internal linking to boost page discovery.
- Request indexing through Search Console.

How to Fix 'Crawled – Not Indexed'
ERROR IN GOOGLE
SEARCH CONSOLE

DUBAI SEO COMPANY

1

Internal Linking

Internal linking helps search engines understand your site structure, guiding users and search bots to important pages. It boosts SEO by distributing page authority and improving crawlability.
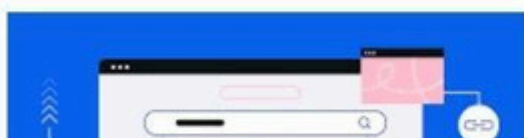

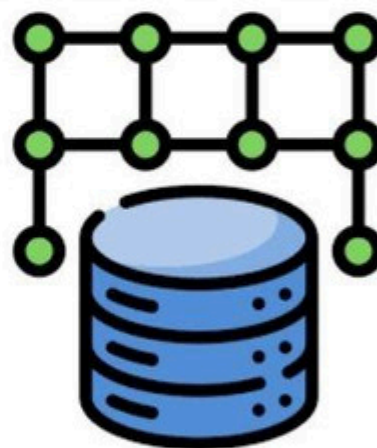

2

Search Intent

Understanding search intent helps create content that aligns with what users are searching for. This increases engagement and improves rankings by meeting the needs of your audience.

3

Structured Data

Structured data organizes content in a way that search engines can easily interpret. It enhances visibility in search results by providing rich snippets, improving click-through rates and SEO.

4

Private Content
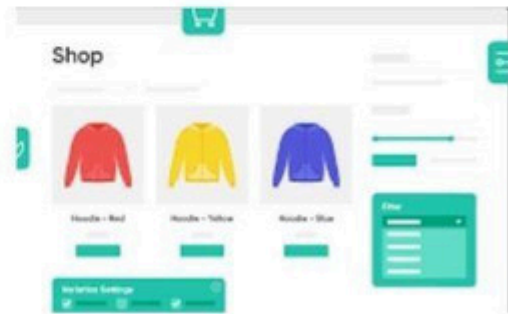

Private content refers to pages

or sections restricted to certain users. Ensuring search engines can access important content while keeping sensitive information secure is key to optimizing SEO.

5

Expired Products

Expired products should be removed or updated on your site to avoid hurting SEO. Keeping outdated listings can confuse both users and search engines, lowering credibility and rankings.
