

Hyperautomation combines ML+AI to boost accuracy

Analyze, Modify and Load scraped data from your applications (HR, Legal, Purchasing or Contracting) to ensure accuracy. First, scraped data is analyzed and prepared for predictive analysis. Next, data accuracy or fit is determined by NLP based models in NuMantra's ML/AI. Then, changes are made prior to loading via pre-built APIs to 3rd party applications, or it's used for further analysis.
