### One Wall Kitchen

To minimise space, a one-wall or single-line kitchen keeps all the cupboards and appliances against one wall. Because of how close the counters are to the sink and appliances, this design can actually be very effective.

## Galley Kitchen

A galley kitchen design layout, sometimes referred to as a corridor kitchen layout, consists of two parallel walls or runs of cabinetry separated by a three to five foot long corridor or walkway.

## **L-Shaped Kitchen**

L-shaped kitchens typically feature two open ends, allowing for many entrances and exits. As a result, the area can accommodate movement without obstruction. When entertaining, a well-organised kitchen may be really helpful because less crowding means more space and less stress when making food!

## **U-Shaped Kitchen**

A U-shaped kitchen is a typical design with built-in cabinetry, counters, and appliances on three sides and an open or cased doorway or entry door on the fourth. A freestanding island can be included in a U-shaped layout if it is in bigger kitchens.

## **G-Shaped Kitchen**

G-shaped kitchens, as their names indicate, have four sides which form the letter "G." Although there is generally a fourth dimension made with a peninsula for additional countertop space, it is pretty similar to U-shaped kitchens.

## **Kitchen Island**

A kitchen island is a separate cabinet that can either complement or match your current kitchen design. A kitchen island can be an additional storage space with built-in storage drawers or cupboards, act as a breakfast bar in kitchen with additional seating arranged around it, or even act as a secondary hob.

## **Peninsula Kitchen**

When it comes to adding extra counter space to your kitchen, a peninsula is similar to an island. The distinction is that it is open on three of the four sides and fastened to the wall or kitchen cabinets at one end.
