

# CWS Completes Deadline Privacy Window Film Installation Project for Rand Construction

BALTIMORE – When Commercial Window Shield was contacted by Rand Construction on Aug. 5 about a **privacy window film installation** project for a client of theirs in Baltimore, the question was asked: “When is the deadline?”

The answer: “Aug. 9.”

As has always been the case in Commercial Window Shield’s nearly 40-year career, the response was: “No problem. We can handle it.”

The project involved installing privacy solar film on the lobby windows of the 19-story Harborplace Tower at 111 South Calvert St. The Washington, D.C.-based Rand was hired by Brookfield Properties for a \$12 million renovation of the building, which included the privacy window film installation.

The main reason for the urgency to have the window film quickly installed was Rand had on site the scaffolding equipment required for the window film installers to reach the upper parts of the lobby glass that was 50 feet high. The scaffolding was scheduled to be removed on Aug. 10.

Commercial Window Shield installers started their work the morning of Aug. 7 and worked all weekend and late into the night on Aug. 9 before completing the project on time early on Aug. 10.

Over the years, **Commercial Window Shield** has developed a reputation among its many customers for completing difficult projects on tight deadline. Among its most famous projects was the post-9/11 installation of security window film on the U.S. Capitol, and all U.S. House of Representative and Library of Congress buildings in 40 days.

The project is another example of Commercial Window Shield's close working relationship with some of the country's best-known construction and property management companies. The company has also completed security, solar control, RF, smart, switchable and privacy window film projects for JBG Smith, Boston Properties, Gilbane Building Co., HITT, Harvey Cleary, D Watts Construction and Davis Construction.

Although Commercial Window Shield also is expert in the installation of other niche films such as smart or switchable window films, Radio Frequency [RF] window films and **anti-bird strike window films**, the company's major focus in its nearly 40 years has been security and solar control window film installation. Its clients have included FBI headquarters, the Pentagon, Grand Central Terminal, Merrill Lynch headquarters, the United Nations, the Willis [former Sears] Tower, O'Hare and Seattle international airports, and the Philadelphia and Denver mints.
