

# Why Do We Need To Enable Java in Chrome?

If you are using the latest version of the Google Chrome browser, the web pages with embedded Java applets no longer run. So, by enabling [chrome java settings](#), we can resolve this issue. When we load a website where Java technology is used, it shows a message; the Chrome browser does not support Java. The reason is that the Chrome browser no longer supports the NPAPI. So, that is why we need to enable Java in Chrome.
