

## Bridging the Gap in Child Education

Children are the future of India and education is the tool that opens the golden door of choices, freedom, and knowledge for these bright minds. Currently, the education system in India is divided into primary and secondary schools. There are many governments and private schools for the elementary education of children.

There are more than 1 billion children attending school every day. Most of the students studying in private schools are from well-to-do families but students in government schools are from a financially weak section of the society. The right to equal education goes for a toss when there is an evident economic divide in society. Many children with great capabilities are subject to child labour to meet ends. However, the Indian government and several NGOs are making efforts to provide access to child education to every kid in the nation. It is time to donate funds and resources for the betterment of children living on the streets and slums. Every penny donated is used for a good cause of child education.

## How Do NGOs Utilise the Money Donated by You?

The collection of money, through offline and [online donations](#), is used for providing necessary resources, stationery, school infrastructure, and educational sponsorship of poor children. It is very important to emphasise on development of good ethics and better education for children. It builds the path to success and helps in developing employability skills in

students.

## Necessary Resources

Many government schools lack basic facilities such as separate washrooms for girls and boys, chairs, desks, and stationery goods. The funds collected from various sources are utilised for providing these resources which is crucial for the proper education of children.

## Educational Sponsorship

One of the best ways to ensure child education without any break is sponsorships. The money from donations is used to provide sponsorship to bright minds for their higher studies. Many students benefit from such sponsorship programs and can build a bright future. A well-educated child can get a better job and can provide financial support to his/her family. Education is the only tool to end the cycle of poverty and lead a better life.

## Technology for Child Education

Today's world is technology-oriented. The education system is evolving every day with the implementation of technology for a better learning experience for children. The donation money is also used to up the level of education for poor children. The hybrid learning system is the reality in the times of the COVID-19 pandemic. Various learning tools like tablets, projectors, and computers are required for online learning. NGOs provide these digital gadgets for the practical learning of students.

## Teachers' Training

Teachers are the knowledge providers to students. The students depend on teachers to gain knowledge. It is very important to train the teachers to work on the latest technology and modern educational practices. Money from offline and online donations is used to provide teachers' training.

## Vocational Training

NGOs provide vocational training to underprivileged children. The training courses include tailoring, computer graphics, and carpentry which are essential employability skills. These vocational trainings are very helpful to such kids for getting a decent job without much investment.

Education is key to building confidence and improving the standard of living of a person. This is a very important reason to donate to child education in India.
