

Mosquito Control Services in Kolkata: 4 DIY Tips for Keeping Mosquitoes Away

Mosquito Control Services in Kolkata: Protecting Your Home and Family

BLOG

Be it in Kolkata or any other city in the world, there's no denying that one of the most harmful pests in our environment is the mosquito.

It spreads a range of deadly diseases like dengue, yellow fever, malaria, chikungunya, and others. The only effective technique to keep mosquitoes out of our environment is through Mosquito control service in Kolkata, often known as mosquito fogging.

People have the misconception that using repellents and sprays will get rid of these pests. However, there are some DIY methods that you can certainly try to keep these pests away. Although these DIY techniques for mosquito control can be really effective, you need to keep in mind that they might not be the best option for you.

This is where **mosquito control services** come into the picture. You can kill mosquitoes regularly and maintain your surroundings clean with the help of **DR Pest Control's mosquito control services in Kolkata**. Our mosquito treatment is an integrated strategy to get rid of mosquito breeding grounds and conduct a thorough assessment of the site and its surroundings to spot the problem areas.

Now let's have a look at some of the best DIY mosquito control techniques that you can use for your home.

1. Get Rid of Standing Water

Still water is one of the mosquitoes' biggest attractions. Still, stagnant water is used by mosquitoes as a breeding ground. If you've ever seen a lake or retention pond brimming with mosquitoes during the summer, you've seen the swarm that motionless water can attract. Consider stirring up any pools of still water you may have, such as birdbaths, motionless fountains, or untreated swimming pools. Mosquitoes won't be able to use these areas as breeding grounds if there is something added to keep the water moving. This will drastically reduce the number of mosquitoes you find near your home.

The second choice is to just completely drain the water, which may not always be feasible or desirable. However, with the water gone, the mosquitoes won't be able to spawn as easily. In order to keep mosquitoes away, think about removing still water in some way.

2. Keep the Air Moving

Mosquitos are extremely small and susceptible to air currents. It means that one of the many ways you may keep them at bay is delightfully simple. There will be fewer mosquitoes if you keep the air circulating, especially at ground level.

The exposed skin on the legs is one of the areas where mosquitoes most frequently bite people. Simply by positioning fans at ground level to keep the air circulating and mosquitoes confused, you can keep a large portion of mosquitoes away.

This also keeps your outside spaces cold, which is beneficial in the heat. In order to assist avoid mosquitoes, think about adding a few fans.

3. Reduce Shade Where Possible

The fact that mosquitoes often take over the shade you're looking for is one of the most annoying aspects of them. This is especially bothersome when you're trying to cool yourself and find yourself surrounded by pests.

One of the first things you should consider doing is getting rid of the shade because mosquitoes enjoy it. By reducing or completely eliminating shade, you can fend off mosquitoes. This could result from trimming shrubs and trees, removing large umbrellas, or any other source of shade.

4. Remove Still and Stagnant Items

Water will not simply be where you expect it to be. Find any other areas in your yard where water may have pooled without your knowledge. It's crucial to perform some upkeep if your yard is cluttered to keep mosquitos away.

For instance, a tarp draped over a pile of firewood may collect rainfall in its folds. This water has the potential to swiftly turn into a heaven for mosquito or other pests. Wheelbarrows and other tools that can trap water may also be seen among the yard equipment.

Additionally, search your surroundings for any toys or playthings that kids would use in your yard. Rainwater can be captured, for instance, in sandboxes and the toys used for them. Keep your yard clean and pest-free by performing basic yard maintenance.
