

# The Ultimate Guide with all the Solutions Required in Scan to BIM service

In the AEC industry, the process of laser scanning was initially practiced and used in the year 1990. The core reason for it was to capture the current details and conditions of the building along with its design purposes. With the change in the process and demand of advanced techniques.

Scan to BIM Services is quickly becoming a standard practice for a number of companies and people who are either of the ways connected with the service. The list for some of them are laser scanning companies, contractors, sub-contractors, MEP engineers, surveyors and it is all with regards to their Renovation, Refurbishment, Retrofit or Reconstruction Projects which they have undertaken.
