

Advantages of Metal Awnings

Louvered Roofs

Some individuals have second thoughts when it comes to having metal awnings installed on their homes. One reason is they believe that since it is made of metal, it's more difficult to remove if they decide to substitute it. That it might damage their walls or windows in the event the awning has to be taken out. Another reason is that there are not any designs or styles to pick from as compared to fabric based awnings.

Metal Awning

While these above reasons could be okay, the simple fact is that there are far more advantages to using metal awnings along with other materials such as fabric and vinyl. Here's a partial list of reasons as to why metal is a better choice.

1. It is more durable.

Without question, this is a fact. Metal is stronger than fabric and nobody could deny that. Even lighter metals like aluminum, which is quickly becoming the metal of choice for this purpose, is powerful enough to withstand considerably beating and abuse.

2.

When correctly treated with anti rust paint, a metal awning will remain strong and looking like new for many years to come even when it's been subjected to too much snow or rain. It is even better against sunlight because it is thicker than fabric and thus provides better and colder shade.

3. You can change its colour as frequently as you want.

With a fabric awning, you'll need to replace it entirely in case you need a different color for the awning. With a metal structure, all you will need to do is to repaint it with your color of choice.

4. It requires less maintenance.

Since it's better weather resistant qualities, an awning made from metal will last longer without a lot of cleaning or repair. No rain, sunlight, snow or wind can quickly break a metal awning, when compared with fabric. This may also translate to higher savings on your part since you will spend very little because of its maintenance as well as replacement.

5. No need to down it should the weather change.

Unlike vinyl or fabric based awnings which you'll have to take down as soon as the snow starts to fall, you do not have to eliminate an awning made from metal whenever the weather changes. You exert less effort, less maintenance and your house will appear the same for as long as you want it to be.

There are a number of other reasons why you need to pick metal over fabric but these five are one of the most important ones. However, the fact remains that picking the material to your

awning boils down to 2 things: the taste and the style of your home. Mix both together and you are able to come up with the best looking awning to your house that you will enjoy for many years.

Smart Patio Plus is your premier provider of the adjustable pergola in California. If you are looking for a louvered roof, pergola, patio cover, awning or any other outdoor shade structure then call us today.
