

# Is It Possible To Do Linksys Extender Setup Without a Computer?

Wifi extenders are something that everyone needs in today's time because of the important role the internet plays in our lives. Linksys Wifi Range Extender is one such lifesaver device of the many out there. For that, you need to perform the Linksys wifi range extender setup to begin using the extended network. Do you want to perform the [Linksys Extender Setup Without Computer](#) and not getting the right solution anywhere? We will discuss the correct way to do Linksys extender setup without a computer and also, the manual way of setting up the Linksys extender i.e., using the computer.

## Detailed Guide For Linksys Extender Setup Without Computer-

The WPS push button helps in establishing a connection between the wifi router and the extender without any computer. It is a wireless connection option. Other than the physical WPS button, you can also set the Linksys extender setup page using the WPS option in three ways.

First of all, connect the Linksys wifi extender into an electrical supply socket. Then push and hold the WPS button available on your Linksys range extender. Now check the LED bulb on your Linksys extender as you can see the Linksys extender network status is XXXX network. So now if the power LED bulb is lit, this indicates the extender is establishing a connection with the router. In some time the LED lights on the extender will turn solid green. You have to perform this guide again in case your Linksys extender has a dual-band frequency. That's it! Your Linksys extender setup is done and dusted.

## Detailed Guide For Linksys Extender Setup With A Computer:-

Some range extenders or wifi routers don't come with a physical WPS push button, in that case, you can either use the WPS Pin or router's Pin option to set up the Linksys wifi range extender.

1. Using the WPS pin:

Open the default web browser on your computer system. Launch the Linksys extender setup web page. On this setup page, input the WPS pin, if any, of your range extenders in the second field. That's it! You just have to enter the WPS pin and you will be able to set up the Linksys wifi extender. Isn't that cool?

#### 1. Using the router's pin:

Launch the preferred web browser on your computer system. Then open the `extender.Linksys.setup` page to proceed. If you have the router's pin then, enter it in the third field and hit the enter button. Now see the WPS LED bulb, if it turns stable then your connection is established successfully.

### **You Don't Need A Computer For Everything!**

That was all you need to know about [Linksys Extender Setup Without Computer](#) and with a computer if required. While you are putting up your Linksys extender, make sure that the power supply is consistent and there are no fluctuations as it might hinder the extender setup process. Also, the internet connection must be steady and active to finish the configuration of the extender. Enjoy the extended network of your Linksys wifi extender.
