

Acoustic And Heat Insulating Material Manufacturer - Park Non Woven

[Acoustic And Heat Insulating Material Manufacturer](#) - Park Non Woven

PARK sound-absorbing and heat-insulating material is produced by combining the synthetic fibers of PP+PET or PBT+PET. The bi-component material is a three-dimensional network structure known for its lightweight, fluffiness, high resilience, and thermal resistance, leading to better sound-absorbing and heat-insulating performance. One of the key benefits of this is a reduction in energy consumption and therefore lower costs.
