

Multivendor Opencart eCommerce Portal

[Opencart Multivendor](#), when installed on any eCommerce website set up, opencart website becomes opencart marketplace website. On that website, vendors can add products and sell products. They also have many advanced features. Seller vacation, RMA, Smart Product, multi-store, template products, simultaneous payments, seller detail module, commission, subscription invoice, template product, etc.

Opencart Multivendor admin makes money in three ways. One is selling his product through the marketplace as an admin. If there are many sellers, traffic will increase and become more popular. So if the admin sells his product, it will help him get more customers. This will result in positive growth in revenue.

Let's say that a seller sells a lot of product admin products. This could allow them to be sold in large quantities due to cross-product sales and related product sales.

We will now discuss two revenue-generating options for admins: vendor subscription and commission.

Functionalities Opencart Multi-Vendor

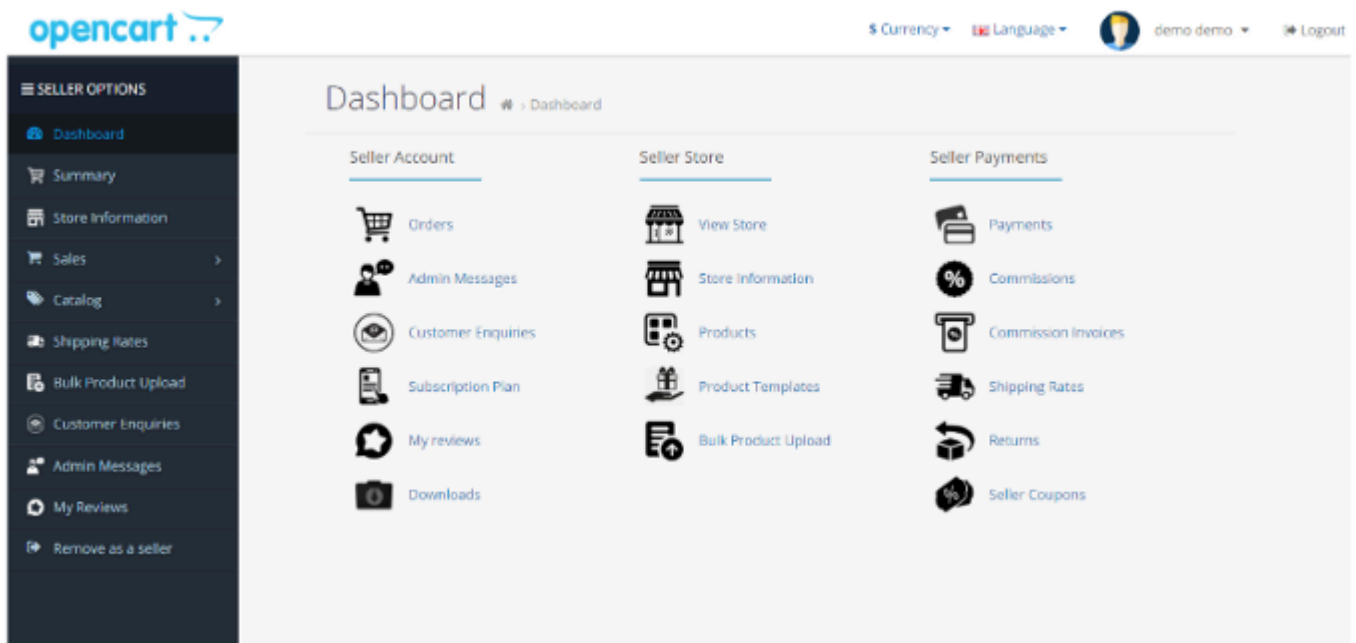

A vendor must pay a subscription amount to join a marketplace. The admin then decides the number and featured products of the featured products, featured shops, etc. Once the subscription plan has been activated by the vendor,

it will be valid for the product(s) described in the plan. It will also have a number of validity days, the number of allowed featured products, the number of other benefits that are allowed on the home page. Subscription plans are available.

A fully operational seller dashboard is available. Sellers can manage their seller functionality and features, such as catalog, products, and orders. Commission, commission invoices. Subscription plan subscription invoices. Shipping, payments. Blog, comments. Bulk product

upload. Store information. Inquiry management. Review management. Download management.

You will find many new exciting features, such as seller vacation mode, Hyperlocal set-up, Quick edit, smart forms, shipping module, and bulk product upload, bulk shipment upload, attributes, option upload, etc.
