

# Why Commercial Offices Are Loving The SPC Flooring Option

When was the last time you had a crush on a flooring option? Well, if you haven't, SPC flooring can bring some flirtatious glimpses to you.

*Tingo - Organic - Vinyl SPC*

The Stone Polymer Composite or Stone Plastic Composite (SPC) drives stiff, sturdy, and less resilient flooring option for homes or offices. Even groggy eyes can witness how this thin yet

sturdy composite brightens for a high-traffic commercial space.

We admire the choices of a myriad of people towards [wood grain flooring](#) or WPC flooring for the magnificent and beautiful and soft composites they are. Perhaps, someone may reflect a delicate architecture on these composite varieties. Nevertheless, [SPC flooring](#) furnishes features of a robust core, the solid wear layer, and less susceptibility to dents or damages.

Commercial environments that witness the highest footfalls increase the chances of depressions and damages to the soft kind of flooring. No doubt, anyone not recognizing this challenge would fall for the impeccable aesthetics or presentation values. SPC doesn't share such characteristics even with a thin layering. The strong attributes cling on to the flooring without causing intrinsic damages or whatsoever.

Shouldn't this be a golden opportunity for installing SPC? The ultra-durable features, unique wood & stone appearance, sound-absorbent features, and easy-to-install options pave way for SPC as the first choice for businesses to install in their offices. Though price factor and low underfoot comfort remain the major drawbacks for SPC, it draws out attention with the way it reduces maintenance and enables 100% waterproof features.
