

#GameJet is Working to Launch 3 Casino and Mini Games in October

The start of the year 2021 is assumed as a time to look forward and notably there is nothing more exciting than to check out new games. There are many highlights of the most anticipated blockchain games that have broken the records. One such gaming NFT platform is GameJet.

This is a first to take a successful entry in the decentralized gaming industry. The GameJet platform brings together NFT, entertainment, gaming and staking fundamentals in one all-encompassing environment.

GameJet is successful to achieve more than 1, 50, 000 active players. This project is one of the top demanding platforms and is breaking the news in gaming ecosystem. A meeting with the European blockchain developer last week was successful to launch and release 3 games in the month of October.

The players have the option to freely stake the native token \$JET while playing games on official set and the NFT based mini games for faster evolution of the community and collect exclusive rewards to stake and trade in digital in-game asset.

GameJet to Launch Casino and Mini Games

The editor at GameJet and gaming marketplace are rolling out future releases of more stable mini games and advanced gaming setup in October. Nevertheless, the project's potential is relatively strong; hence we decide to release the casino and mini games where we will reward the winners and active participants. Though, the entire details and official announcement related to the game launch will be released soon.

Recognizing the current trend and sought-after nature of gaming environment and cryptocurrencies, GameJet chooses to develop and deploy cryptocurrency casino and mini related games that seems to be a good idea for the firm to venture into.

There is variety of online games available from top game providers that will be updated regularly. These games at GameJet will be licensed and fully regulated to avoid security and regulations issues. The competitive games by GameJet will provide major live matches and pre-match events every month.

The players can also participate in vibrant mini games and e-sports to collect rewards and bonuses. Our team carefully chooses to launch the initial major NFT gaming where players can freely challenge in 1vs1 or team battles.

We have also made several payment methods available to trade, buy, sell and stake \$JET tokens. The players can acquire the digital assets to get the edge they require in the different games offered on the GameJet platform.

Unlike other demanding blockchain-based games, GameJet developers chose the JET token to tend as a backup working on Tron blockchain. This is due to the broadly enhanced security and increased TPS to allow the owners to play without waiting for long times, costly gas fees, and unstable networks.

The games developed on GameJet are not all about competition but enjoying the finer things in life. When not winning or defending in games, the players can easily partake in distinct mini games. The GameJet universe is ever-expanding and the team of developers is effortlessly working towards establishing a sphere which is enveloping and all-encompassing.

In the future, GameJet [the game-maker] will be partnering with top decentralized gaming companies to offer a number of high-level intense games on the platform. There will be games built on GameJet where the winners and active players will be determined based on a combination of luck and skill.

GameJet will also host a presale in the last week of September. After analyzing the development of GameJet from the scratch the experts have mentioned their growth estimation related to fundraising tokens and officially launched events. The JET is estimated to reach 50x in 15 days as of game holders.
