

## Enjoy Your Trip With British Airways

**British Airways** is of course the national airline of the United Kingdom. It is a massive airline and flies both nationally and internationally to many hundreds of destinations. The main headquarters of the airline is Heathrow Airport in London.

For many years, British Airways was (and is still to some extent) protected because it only served certain routes and was (and still is) preferentially placed at most of the UK's major

airports, such as Heathrow and Gatwick.

Unfortunately, this protection did not last, and like many state-owned airlines, BA has had to re-invent the business in some respects to survive the increase in competition.

You can get various **British Airways flight deals** to London and worldwide. Search for the lowest prices on flights from the UK to New York, Los Angeles, San Francisco, and more.

British Airways was one of only two airlines that operated the Concorde. This became a flagship for the airline and it was used for daily flights between London and New York.

However, eventually, the Concorde was taken out of operation due to spiraling costs and decreasing passenger numbers. BA has fitted the aircraft with British-built Rolls Royce engines. However, they also have a smaller fleet of Airbus. So are you planning your next trip? Book **British Airways flight tickets** with **Airowings** and save your money.
