

Few steps To Clean Air Conditioner Filters like a pro!

Cleaning the air filters of your air conditioners is important to avoid the collection of bacteria, dust, mold, and mildew. Often, it is one of the most overlooked aspects. However, ignoring it can result in compromise of air quality and a decrease in the efficiency of the air conditioner. An increase in the dirt on the air filters can also lead to higher electricity bills. So, it is important to clean the air filters at regular intervals. If you are unable to do it yourself, you can avail the help of an **Aircon Installation Company** or a [Split Air-Conditioning Repair and Service](#) provider.

Here are the steps you can follow in order to easily clean the air conditioner filter.

Step 1: Turn Off the Air Conditioner

When you want to clean the air filter, the first step is to turn off the air conditioner. Turning it off ensures that the dirty air does not get circulated in your home.

Step 2: Remove the Air Filter

Once you have turned off the air conditioners, you need to open the air conditioner unit with the help of a screwdriver and remove the air filter. Certain units have a number of air filters. So, make sure to check all the vents and remove the filters.

Step 3: Vacuum the Air Filter

In order to clean the dirt buildup on the air filter, you will have to use a vacuum cleaner first. Next, with the help of a microfiber cloth, you can clean the dust present around the frame. Removing the top layer of dirt can help in making the next step of cleaning the air filter easy.

Step 4: Wash the Air Filter

To get rid of the remaining dirt on the air filter, washing it is essential. Thoroughly and gently rinse the air conditioner filter outdoors or in a deep sink. Then keep it for some time and let it dry. If you want to deep clean the filter, you can soak it in a solution of warm water and white vinegar. After one hour, do clean it and let it dry.

Step 5: Reinstall the Air Filter

Once all the dirt from the air filter is cleaned, it is ready to be reinstalled. If you find any signs of damage, you can consider a replacement.

Conclusion

Cleaning the air conditioner filter is not a tough task. Following the right process ensures that cleaning is done right. However, in case of any difficulty, you can avail the help of the [Air Handling Unit Repair and Installation](#) professionals.
