How to download webroot safe wsainstall exe ?

Downloading [webroot safe wsainstall exe](#) is a very simple process. There are two ways to download this file. Here first of all i will let you know the easy way to do that.

In the first step just open a web browser in your computer like internet explorer , windows edge or google chrome.

Now open a URL page which is www.webroot.com/safe_download.

Looks like your webroot installer file is now downloading. If it is not downloading then have a look on the bottom right of your page. There you will find some options like save , run or cancel. You need to click either save or run.

Assuming that your programs downloading is done. Just double click on that program to run it. When you will run the program it will ask for your permission to install give it positive response. Seems like it is asking for your keycode now.

Put the keycode , and in the next step give your email also when it is asked.

Finally our webroot secureanywhere is doing its first scan.

What is a [webroot safe install](#) and where you will find it in order to activate webroot?

A webroot keycode is a unique character string. There are total 20 alphanumeric characters in a webroot keycode. You can find this webroot keycode on the back of your retail card. And one more thing you need to peel it gently to get it from the back of the card. Another thing is , if you purchased your webroot online then it will come to your email directly.
