

Facts About backconnect proxy Revealed

Rotating Proxies is a brand of proxies. As a refresher, a proxy server is a server that operates middle-man for requests from clients seeking resources from other servers. Proxies in general provide you anonymousness. However, IP rotating proxies, are similar to normal proxies but with some dissimilarities. One of the most striking help of Backconnect proxy is that they ensure you do not get blocked especially when doing huge requests such as web scraping or SEO as you will get dynamic rotation of IP address for every request or every fixed interval. Though Automatic Rotating Proxies work almost like a standard proxy, as they have the same setup and operate similar to them with the same advantage and disadvantage, there are specific variation. The rotating nature of the proxy differentiates the backconnect proxies from the regular proxy. The main advantage of Backconnect proxy is that it allows you to have access to huge base of proxy IPs worldwide easily using a easy single proxy IP and port(s) configuration instead of entering thousands of IPs on your web application, web application or any program.

This article will attempt to discuss about a web service that offers you USA, Asia, Europe and Worldwide mix IP rotating proxies with premium HTTP/HTTPS proxy servers ideal for web data scraping/extraction tools, data mining applications and SEO proxy tools such as Xrumer, Senuke, GSA SER, GScrapper, Scrapebox, Hrefer etc and any other web scrapers. Thousands of premium and fast http proxy servers located in multiple countries worldwide are routed through a central access point (Gateway Server) allowing you to use IPs from over 50 different countries. The unique Automatic Rotating Proxies service is reliable, fast, automatic and fully redundant (24/7).

The Backconnect proxy are accessed via a gateway server. Once connected to the gateway server, each request is then re-routed to different http proxy IPs in multiple countries. By using Backconnect proxy, you can generate much more number of search connections in parallel. Your IP will keep changing every time you connect to the [Automatic Rotating Proxies](#) . In fact, they provide anonymity that is more than what other regular proxies offer, as the search is made with a new IP every time, you surf the internet.

Among the usual reasons why people utilize Dynamic rotating proxies are:

- For web extraction and data mining: With Rotating Proxies service, you will have the unique

privilege to scrape unlimited web data faster by running a high volume of concurrent requests with each request coming from a different IP address thereby allowing you to get Unrestricted access to unlimited web data.

- For SEO Programs: IP rotating proxies works great with all SEO tools such as GSA SER, Senuke, Xrumer etc. Unlike other proxy vendors who limit your connections and make you pay for more threads, you get unlimited requests for a flat monthly fee.
- Automated and Multi-threaded Web Actions: Automatic Rotating Proxies performs best when used in an automated and multithreaded manner using any automated tool. With IP rotating proxies system, the number of unique IPs you can get depends on the number of threads your automated Scraper is capable of running.
- Search engine submission companies
- Competitive and pricing skill
- web data extraction
- Monetary and market research

Some of the selling points of this backconnect proxy service are:

- Access to both HTTP and HTTPS (CONNECT) proxy with BIND, CONNECT and UDP support. All proxies support both HTTP and HTTPS
