

An A to Z Guide of Miscarriage: Symptoms, Risks and Treatments – Indira IVF

The bleeding is the most obvious [miscarriage symptoms](#). These occur before, during or after the miscarriage. Emergency consultation is therefore highly recommended. However, not all bleeding means that a spontaneous termination of pregnancy takes place.

From mild blood loss and not serious loss can occur during pregnancy. In addition to this symptom, a pregnant woman who has suffered a miscarriage may also experience pain in the lower back and cramps in the belly.
