

What are Fume Extraction Systems important for industries?

Fume extraction systems are integral components of any industrial setting, providing a safe and clean environment for workers to operate in. [Fume extraction systems](#) work by drawing in and filtering out hazardous or noxious fumes, vapors, dust particles, and other airborne contaminants that can be potentially hazardous to the health of employees and the environment. These systems can be used to remove particulate matter from a variety of sources, including welding smoke, chemical vapors, grinding dust, and more.
