

Do not Get Left in the Cold: The Top 5 Steps for Proper Furnace Maintenance

DO NOT GET LEFT IN THE COLD: THE TOP 5 STEPS FOR PROPER FURNACE MAINTENANCE

Expert heating & air conditioning contractors in Maryland & Washington DC.

REGULAR FILTER CHECKS:

Replace or clean the furnace filter every 1-3 months to ensure efficient airflow and maintain indoor air quality.

THERMOSTAT CALIBRATION:

Verify that the thermostat is calibrated correctly to control the temperature and avoid overworking the furnace.

INSPECT AND CLEAN DUCTWORK:

Check for leaks, obstructions, or accumulated dust in the ductwork as these

the ductwork, as these can affect airflow and system efficiency.

LUBRICATE MOVING PARTS:

Lubricate the motor, bearings, and other moving parts to reduce friction, improve performance, and extend the furnace's lifespan.
