What is Streaming?

“Streaming” is a playback method that you can enjoy immediately while receiving media data such as video and audio while connected to the Internet.

- “Download” is also a playback method for video and audio distribution services, but ...
- The “streaming” playback method allows you to download and play the videos you want to watch and the music you want to listen to on the Internet without waiting.
- The “Download” playback method cannot be played until the video or music has been downloaded.

As of now, many video and music distribution services provide video and music by streaming method. For example, Nico Nico Live Broadcasting, SHOWROOM, Eplus, Johnny’s Live, Twitch, Amazon music, LINE MUSIC, etc.

Save streaming

Streaming is delivered in real time. Generally, you cannot save media such as streaming video and audio. Originally, the streaming distribution method was created on the premise that video and music are not saved.

But that doesn’t mean there’s no way to save streaming. Streaming save tools make it easy to save your streaming. This time, I will explain in detail how to save streaming in Chrome.
